

Important: Throughout the spring and summer seasons, we do quote submissions on a first-come, first-served basis and work hard to do them right the first time. We believe in honoring our commitment to each customer who requests a quotation; therefore, we can not consider demands for immediate quotations. We will generally be able to turn quotations in about 24-36 hours. During peak season, we will require up to 3 days to do a quotation.

Basic Information

Name:

City of Installation:

State: Contact Tel. #

(We do not call unless your email address is entered incorrectly)

Email Address:

(We have never sold or exchanged your email addresses or other information with any other company!)

Load Requirement Information

Your city's building department issues building permits. You may or may not need an actual permit for your installation, and this is the homeowner's sole responsibility. ***We strongly recommend that you obtain your permit before purchasing.*** However, panel thickness, beam placements, beam size, and the distance between posts out front are all functions of the loads (snow & wind) your cover will be subject to. Even though you may not require a permit, you will still need to contact them to get your local building code requirements so we can supply you with the 'correct' materials!

Snow Load (lbs/sq.ft.)

Wind Load (mph.)

Will you be getting a permit? YES ☐

NO ☐

Our Terminology

Single Slope Roof:

A **single slope** or **single pitch roof** is a roof that has a single pitch in one direction. They go by many names, including pent roofs, shed roofs, lean-to roofs, or skillion roofs. They are commonly attached to a house wall or fascia board and supported out front by a support wall, beam, or post assembly.

Season Sunroom

We typically define a 3-season room as one with single-pane windows and not intended to be heated or cooled permanently. Both the Alpha Plus and OMEGA systems can be built with single-pane glass windows.

Season Sunroom

We typically define a 4-season room as one with at least double-pane windows and that can be cooled permanently. Both the Alpha Plus and OMEGA systems can be built with double-pane glass windows. **ONLY THE OMEGA sunroom system comes with the extra vinyl cladding on the extruded aluminum framing to provide that extra layer of thermal protection, making it the ultimate in 4-season comfort.**

Wall Dimensions

Backwall Height: Ft. In.

**From the deck to the underside of the roof installation point*

Left Side Projection: Ft. In.

Total distance **away from house wall*

Left Side Door Placement: Ft. In.

Measured **away from the house wall. Leave blank if no door on this wall.*

Right Side Projection: Ft. In.

Total distance **away from house wall*

Right Side Door Placement: Ft. In.

Measured **away from the house wall. Leave blank if no door on this wall.*

I only need one projection wall... Left ☐ Right ☐

Front Wall Width: Ft. In.

This is the total measurement **parallel to the house wall.*

Front Wall Door Placement: Ft. In.

Measured **away from the left corner. Leave blank if no door on this wall.*

Electrical Utility Mullion:

This option allows for electrical boxes to be installed between modules.

***NOTE:** All doors automatically come with Electrical Utility Mullions on each side

- The standard H-channel creates a 7/16" width between panels.
- The EUM creates a 3 1/16" width between panels. Consider the aesthetics along a single wall for this option.

How many on the left side projection: All ☐

How many on the right side projection: All ☐

How many on the front wall width: All ☐

The back wall installation height is required. It is either from the deck to the bottom of the fascia board (A) or from the deck to the bottom of where your new roof is to be installed on the wall (B).

Please fill out all information from an 'outside-looking-in' perspective.

Roof Connection Details

Attached to Fascia Board: ☐

If attached to a fascia board, we need your soffit measurement. That is the distance from the wall to the fascia board.

Ft. In.

Attached to House Wall or Ledger Board: ☐

The customer is responsible for purchasing the hardware (screws/lag bolts) needed to secure our roof-mount C-channel to the existing surface.

Note: Your final front wall height will be calculated using a roof panel pitch of $\frac{1}{2}$ " per foot of projection.

Roof Dimensions & Details

Your roof needs to be at least 6" larger, on all three sides, than the sunroom wall footprint.

NOTE: All roof panels are 4' wide. If you require, for example, a 26' wide roof, you will receive (7) x 4' wide panels. During installation, the two outer roof panels will be trimmed (1' off each) on-site by the customer to get the finished 26' width.

Projection: Ft. In.

Total distance **away from the house wall, **including an overhang past the front wall***

Mounting Height: Ft. In.

**From the deck to the underside of the roof installation point. Your roof thickness will be added to this to determine the final height on the wall or fascia board.*

Width: Ft. In.

This is the total measurement **parallel to the house wall.*

Desired Front Overhang: Ft. In.

How far does the roof extend past the front sunroom wall? The maximum allowed is 3' or 25% of the distance from the house wall to the front sunroom wall - whichever is less.

**Your roof panel thickness is chosen based on the load requirements provided by you on page one. We have 3", 4", and 6" thick panels*

***Your roof system is engineered to pitch at $\frac{1}{2}$ " per foot of projection. Therefore if, for example, your roof is mounted at 8' on the house wall, a 12' projection will have a 7'6" front wall height.*

Option:

You can have a 2" x 3" T5 Alloy fan beam installed in the center length of one (or more) roof panels to hang a ceiling fan or run lighting wires.

Fan Beam Installation ☐

Glass Package

(for Windows, Doors, Kickplates & Transoms)

Clear - Single Pane ☐

Clear - Double Pane ☐

Low E - Double Pane ☐

Window Frame Color

White ☐

Almond ☐

Extruded Aluminum Wall Frame Color

*Thermal cladding will be the same color as the framing.

White ☐

Almond ☐

ALIGN WINDOW HEIGHTS WITH THE TOP OF
THE DOOR / HEADER HEIGHT

YES ☐

No, not necessary ☐

Transoms (the area above windows & doors)

12" Glass ☐

24" Glass ☐

Solid ☐

IMPORTANT: You will need a MINIMUM 8'1" tall front wall in order to put glass transoms above windows and doors

Kickplates (the area below the windows)

12" Glass ☐

24" Glass ☐

Solid ☐

* All sliding windows come with fixed exterior screening.

Your initial quotation will contain not only a summary of your Sunroom materials and construction, but a line drawing of what your project might look like based on your choices in these pages.

This will include a selection of window sizes in keeping with your desired wall sizes and door placements.

The description and drawing given in your quotation are simply a starting point toward finalizing what your finished project will look like.
